BIRD FREE

Protecting the
urban environment

Application of *Bird Free*
to De Kapel, Culemborg, the Netherlands, 28 May 2015.

On the east side of the chapel, six window ledges were cleaned and treated with *Bird Free* as shown above.

小島 **BIRD FREE**

On the west side of the chapel, nests were removed from the window ledge to the south (above left). The ledge was treated with *Bird Free* as shown above right.

A total of eight window ledges on the west side of the chapel were treated with *Bird Free*. The recessed ledges, which offer more shelter for pigeons, were treated as shown above.

Testimonial

On 6 October 2015, one of the residents of De Kapel, commented: “De Kapel (The Chapel) had been uninhabited for a number of years before it was converted into apartments, and as such it had been a kind of bird sanctuary.

“When we moved in in December 2014 there were pigeons all over the building and we realised we needed to find a way to get rid of them as the mess was appalling. Since *Bird Free* was installed we have not seen any pigeons at all. *Bird Free* has proved an effective solution.”

On 25 January 2019, the resident commented as follows: “The effect of *Bird Free* is still perfect. Even now, when snow is partially covering the dishes, there are still no pigeons.”

On 28 November 2022, the resident commented: “We never see any pigeons on the building. It’s quite amazing considering the whole building was covered in pigeons when we moved in. *Bird Free* really is a great product.”

On 18 July 2025, more than ten years after *Bird Free* was installed, the same resident commented: “The *Bird Free* remains completely effective today, even though the colour of the gel has darkened over time. The residents are all delighted; we all remember how bad the pigeon problem was before *Bird Free* was installed.”
